Summary: 7 years building user-facing intelligent audio systems across product, research, and engineering

Domains of Expertise: 0→1 Product Management · R&D Collaboration · Audio-to-Audio Generation · Flow & Diffusion Models · Learned & DSP Audio Representations · ML Systems & Inference · Agentic AI Systems

Selected Stack: Python · PyTorch · Lightning · Keras · Transformers/Diffusers · Librosa · TorchAudio ·

TorchServe · W&B · FastAPI · Docker · LangChain/LangSmith · AWS/GCP · SQL · JS/TS · Node · PostHog

EXPERIENCE

Orphere | Product Engineer (Musical Reasoning Agents) Jan. 2026 – Present

Built an LLM-driven symbolic reasoning engine for music theory-aware guidance in an interactive application

SoundBerry (backed by CDP Venture Capital) | Founder (Audio GenAI) Apr. 2024 – Dec. 2025

Shipped a B2C generative music product for stem-level creation, improving model and UX through feedback

Designed diffusion-based audio-to-audio models using CLAP-based conditioning and latent representations

Trained 5B+ parameter models on a multi-TB dataset, evaluated with contrastive metrics and prompt testing

Deployed an API-based inference pipeline for model serving and batch audio generation to platform

Led design partner integrations to define pilots, secure IP-compliant datasets, and validate product–market fit

DAACI (C4DM spinout) | Product Manager (Meta-Composition) Aug. 2022 – Feb. 2024

Scoped requirements and translated research prototypes into solutions for gaming, library music and film/TV

Orchestrated full product development lifecycle for AI generative drum copilot for DAW-based workflows

Owned creation of system documentation based on research prototypes, and co-authored key patent filings

Universal Music (Abbey Road REDD) | Program Manager (Audio Tech) Feb. 2020 – Aug. 2022

Delivered mixer, reverb, mono-to-stereo, and Bluetooth features for a recording app, boosting engagement

Supported M&A and investment due diligence, and advised executives on positioning within the audio space

Accelerated AI and XR startups towards product, GTM, rights acquisition, and partnership milestones

AI Music (acquired by Apple) | Research Engineer (Audio) Apr. 2018; Jan. 2019 – Sept. 2019

Built, trained, and exposed via API an automatic music tagging system using a CRNN model on STFTs

Built and evaluated a preference-optimised music generation system using genetic algorithms and heuristics

Built a spectral extractor and a vocal reverb estimation system using a CNN model on Mel spectrograms

Goldman Sachs | Trading Analyst (Credit Derivatives) Jul. 2018 – Jan. 2019

Estimated default probabilities to price and execute trades across 150+ names and \$100M+ in daily volume

EDUCATION

PSL University (ENS / Dauphine) | M1 Artificial Intelligence and Society (Mention Bien) 2026

Imperial College London | BEng Electrical and Electronic Engineering (First Class & Prize) 2018

Thesis and paper on Multi-task CNNs on HCQTs with HMM smoothing for melody estimation from audio

University of Surrey | CertHE Music and Sound Recording (Distinction) 2015

ABRSM | DipABRSM in Violin Performance, Grade 8 Violin (Distinction) 2014
